

Danny Algazi

Sahnaya, danny.algazi@gmail.com, 0968867756, [LinkedIn](#), [GitHub](#)

Objective

IT Engineering student at Damascus University specializing in full-stack web development. Experienced in building web applications using React and Laravel with a strong foundation in Java and SQL. Passionate about developing scalable, user-friendly applications while continuously expanding my technical skills.

Education

- Bachelor of Information Technology Engineering, Damascus University (2022 – Expected 2027)
- Meta Back-End Developer Professional Certificate
- Meta Front-End Developer Professional Certificate
- Python for Everybody – University of Michigan

Projects

Clinic Management Platform — Team Project

React | Laravel | REST APIs | MySQL | Git/GitHub

Contribution: React Web Frontend & Laravel Backend

GitHub: [[React Repository](#)] | [[Laravel Repository](#)]

- Collaborated with a team to develop a full-stack clinic management platform, contributing to both the React web frontend and Laravel backend.
- Developed and integrated frontend features for doctor and receptionist workflows, including profiles, scheduling, appointments, medical records, encounters, and user management.
- Implemented and refined authentication-related functionality, including user registration, email verification, and login handling for accounts requiring administrative approval.
- Designed and improved reusable UI components and application navigation, including the sidebar, top bar, signup interface, and role-specific pages.
- Used Git and GitHub for collaborative development, working through feature branches and integrating completed features into the main application.

TaskFlow — Full-Stack Personal Project

Laravel 13 | React 19 | MySQL | REST APIs | Sanctum | Reverb | Vitest

GitHub: [TaskFlow Repository](#)

- Built a full-stack task and project management platform with workspaces, boards, lists, cards, invitations, and role-based access.
- Implemented drag-and-drop card/list reordering, card labels, assignees, checklists, comments, due dates, and workspace member management.
- Implemented real-time board synchronization using Laravel Reverb, Laravel Echo, and private channels for live card updates across users.
- Applied a layered Clean Architecture approach in the Laravel backend with Domain, Application, Infrastructure, and HTTP layers, plus repository interfaces and DTOs.
- Added automated frontend tests with Vitest and React Testing Library and maintained backend coverage with 42 tests and 182 assertions.

Work Experience

Junior Software Developer (2025)

IT Valley – IT Services and IT Consulting

- Assisted in developing and maintaining web applications.
- Collaborated with team members to implement new features and resolve bugs.
- Worked with Laravel, SQL, and Git in a collaborative development environment.

Skills

Technical Skills:

- Backend: PHP (Laravel), Java
- Frontend: React, JavaScript (ES6+), HTML5, CSS3
- Database: MySQL, SQL
- Tools: Git, GitHub, Vite, npm, VS Code
- Other: Clean architecture, REST APIs, Responsive Web Design

Soft Skills:

- Proficient in using various software applications and operating systems
- Familiar with troubleshooting and basic IT support
- Teamwork and collaboration
- Effective communication
- Problem solving and analytical thinking
- Fast learner

Extracurricular Activities

- Mada Association — Volunteer: Participated in community initiatives focused on education, awareness campaigns, and local development.
- Youth Committee — Member: Participated in meetings and discussions with local youth on their role and participation in community decision-making, and contributed to youth awareness activities.
- Participated in community work seminars and contributed to the design and organization of initiatives and awareness sessions.

Language Skills:

- Arabic — Native
- English — Professional working proficiency
